

SMART FASHION RECOMMENDER APPLICATION

PROBLEM STATEMENT:

Smart Fashion Recommender is an e-commerce website project that. The back end was written by Flask (Python) and the front end used Bootstrap.

There is a recommendation system to provide useful feedback on what a user might potentially want to buy, based on their previous choices. A chatbot is also available to provide a sense of personalized shopping and seamless service. I plan to implement even more interesting features as future work. Scalable and adaptive, this website can be used by a wide range of e-commerce businesses.
